Purina® High Octane® Supplement

Fly Control with ClariFly®

EFFECTIVE FLY CONTROL FOR CATTLE, HORSES, SHEEP, GOATS AND PIGS

Purina® High Octane® Fly Control Supplement with ClariFly® works as a feed-through supplement, passing through the animal's digestive system and into the manure, where flies lay their eggs. ClariFly® prevents house flies, stable flies, face flies and horn flies from developing in and emerging from the manure – ultimately, interrupting the flies' life cycle.

Reduces irritation by flies in animal housing areas, at a lower cost than alternative fly control options. High Octane® Fly Control Supplement with ClariFly® was designed to limit stress in animals, which can potentially affect growth and production.

Develop a more comfortable environment for you and your animals to help them achieve greatness.

FEATURE

BENEFIT

Clarify® Larvicide

Proprietary ingredient designed to control flies in show animal environments

Cost-effective

Control flies for less than alternative fly control options

Low feeding rate

Low daily feed rate needed to control flies

Safely control flies

Safe ingredients; backed by proven technology to provide fly control year after year

Salt (NaCl), min	0.25%
Salt (NaCl), max	0.75%
Sodium (Na), max	0.63%
Potassium (K), min	0.75%

Directions:

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

When used as directed, this product provides sufficient diflubenzuron insect growth regulator to prevent the emergence of adult house flies, stable flies, face flies and horn flies from manure of treated cattle and house flies and stable flies from manure of treated horses and swine. When used as directed, this product provides sufficient diflubenzuron insect growth regulator to prevent the emergence of house flies and stable flies from manure of treated sheep and goats. Existing adult flies will not be affected. Start feeding before flies appear and continue use until cold weather marks the end of fly season. Use this product as part of a fly control program aimed at reducing fly populations. House and stable flies can breed and develop in decaying vegetable matter or spilled silage on premises in the cattle's, horse's, swine's, sheep's and goat's environment. Good sanitation practices, such as cleaning up spilled feed and preventing manure build-up around barns and fences or under feed bunks, will eliminate additional breeding sites for these flies.

Bodyweight (lb)	Swine	Sheep & Goats	Cattle	Horse
	oz/day	oz/day	oz/day	oz/day
Up to 50	0.4	0.8		
51-100	0.8	1.6

751-1000			4.0	6.0
1001-1250			5.0	7.5
1251-1500			6.0	9.0

Feed as part of a comprehensive fly control program. Best when initiated before the flies are active (i.e. consistent temperature above 60 degrees). Product may take up to 21 days.

POWER IN PERFORMANCE:

We know the best way to help you realize your dreams starts by employing a Winning Philosophy:

BETTER BREEDING

- Genetic Potential
- Selection
- Conformation
- Soundness

BETTER MANAGEMENT

- Cleanliness
- Showmanship
- Consistent Feed Times
- Daily Prep

BETTER FEEDING

- Consistent Intake
- Optimum Growth
- Body Condition
- Bloom & Finish

BETTER HEALTH

- Vaccination
- Proper Sanitation
- Health Program
- Veterinary Care
